Temperature and humidity control conforming to BS5454.

24/7 availability, 365 days a year

Fully auditable SLA with customer online access for verification

Transit case supply

Confidential tape, CD/DVD destruction

Data has become the lifeblood of business, and firms of all sizes can ill-afford to compromise when it comes to protecting it! Dataspace provides unbeatable protection for your data backup and media tapes.

Dataspace has modern, purpose built, strategically located, tape repositories based well away from potential common disaster areas and exclusion zones normally associated with city centre locations. With new laws in place – Sarbanes-Oxley, Graham-Leach-Bliley, and HIPAA – that require companies to preserve records far into the future, it's more important than ever to find the right data protection partner.

A recent industry study shows that 96 percent of companies sustaining major damage to their computer centre do not survive beyond five years. Of businesses suffering a major fire loss, 69 percent failed to survive beyond three years. Despite an increasing reliance on computing and telecommunications in nearly every aspect of business, many businesses play against the odds, fooling themselves into believing that a disaster can't happen to them!

Dataspace provides secure off-site storage and protection for computer backed up data, computer media, data cases, title deeds and original software. In the event of an on-site data loss or virus contamination, you can rely on Dataspace to dispatch a 'clean' data cycle to a nominated site immediately, 24 hours a day and 365 days a year!

Our experienced team will work with your IT managers to establish detailed back-up tape schedules – either daily, weekly or monthly to suit your needs and all deliveries are performed by full time employed and security vetted Dataspace staff. We also establish complimentary disaster recovery procedures to minimise system downtime caused by data loss in the event of a major incident being declared.

With CCTV, advanced intruder alarms, FM200 gas suppression and early warning smoke detection systems, Dataspace Media Vaulting Services will provide the ultimate protection for your valuable data.

10,000 businesses each year are affected by catastrophic data loss by disaster (fire, flood, theft, terrorism) or system failure, 90% of businesses that lose their vital media records are out of business within one year.
